

## Joint Filler J

### Product description:

Joint Filler J is a waterborne all-round filler, medium graded, based on sampolymer. The product is particularly suitable for splice jointing with strips and is also suitable for spackling walls and ceilings indoors.

Joint Filler J meets the requirements for M1 and CE marking according to EN 15824: 2009 and EN 13963: 2005. It also meets the requirements for the Swan.

### TECHNICAL DATA:

Colour	grey
Solvent	water
Filling capability	max 2 mm
Grain size	max 0,070 mm
Density	ca 1 650 kg/m <sup>3</sup>
Weight Solids	ca 73 %
Application	by hand
Consumption	ca 0,3 liter/m <sup>2</sup>
Application temperature	+ 5°C - +35°C
Tool-cleaning	water
Storage	max. 12 months, +5°C - +20°C. S

### How to use:

The substrate must be dry, clean and well bonded. Important that the surface temperature is not less than + 5 ° C!

The filler is applied with a steel filler.

The drying time is influenced by layer thickness, temperature, humidity, substrate etc.

When grinding, protective goggles and respiratory protection should be used.

Tools are cleaned after use with water.
